

Introducing Power Platform and QuickConfig

Making setup and service simplified

Permobil introduces QuickConfig and Power Platform - a software and electronic control system that makes parameter setup and service simple for Permobil power wheelchairs*.

Programming simplified

QuickConfig is an app designed for service technicians, clinicians, and providers that offers a simpler way to configure parameters with a modern interface to set up the Permobil power wheelchair with the user's preferred driving and seating characteristics and standing sequence.

QuickConfig and Power Platform combine the four current parameter setup tools into one simple app that is intuitive and easy to use. This allows service technicians to execute the most common parameter settings with the touch of a button, saving time and ensuring the optimal user setup.

The dashboard provides you access to quick guides that help you set up the most common parameter settings. Advanced setup parameters are available and can be altered by absolute values.

Power Platform's integrated web server allows set up of the wheelchair without WiFi availability. And once connected, the wheelchair will receive wireless firmware updates ensuring the latest functionality.

Service simplified

With fewer components and real-time insights, Power Platform enables improved diagnostic efficiencies and reduced service time. It not only simplifies the power wheelchair electronics, but also allows for quick programming of repair components based on your wheelchair's stored settings in the app.

Set your preferred seat positions in the new joystick

Individual seat memory functions remain available in the joystick and enable users to set up their preferred seat positions. Intuitive icons make it easy to store up to six memory functions. To gain access to real-time seating information, driving range estimations, distance travelled and more, we recommend that users download our free MyPermobil App.

*Power Platform and QuickConfig is available on selected Permobil power wheelchair models. Ask your local representative for more details.

BoB

You can set position and send data to the chair with our new feature Biomechanics of Bodies, also known as BoB.

Training and certification

A certified training program is available through Permobil Academy. On demand training can be arranged with your local Permobil representative.

Learn more about Permobil Academy:

QuickConfig app available
in Google Play and AppStore.

Follow the guidelines in the app to set up your account.
